

Certify Your Value

Verification of GHG emissions

Completing our portfolio of independent services, BVQI is investing to achieve the same leadership in GHG Validation and Verification (V&V), especially now that the rules for different GHG schemes are becoming clear. In line with the official rules, our verification covers factors like completeness, consistency, transparency, accuracy, cost effectiveness, materiality, faithfulness, and more important, improvement of performance in monitoring and reporting emissions. We also perform verification of baseline emissions.

The BVQI difference...

- Global leaders in environmental certification (ISO14001) and environmental training (accredited by IRCA)
- Experts in all sectors, speaking the local language and with knowledge of the local environment and risks
- Applicant Entity to UN CDM – approved to submit methodologies in all sectors
- Accredited verifier for the Chicago Climate Exchange (CCX)
- Accredited verifier for the EU Emissions Trading Scheme (EU ETS) by UKAS (UK)
- Worldwide presence and recognition through our network of 18,000 employees in 140 countries across the globe
- Involved in GHG working groups, in particular on the new ISO 14064 standard (GHG management systems) and EU ETS
- Ability to handle international contracts

Complete service

BVQI can also provide a complete corporate service including:

- Corporate emissions inventory verification under schemes like the World Economic Forum GHG Reporting Initiative or the US Environmental Protection Agency Climate Leaders Programme
- Validation and verification of Clean Development Mechanism (CDM) or Joint Implementation (JI) projects
- Certification of Management Systems: Quality (ISO 9001), Environment (ISO 14001), Social Accountability (SA 8000), Health and Safety (OHSAS 18001) and others
- Assurance of Social and Environmental Reports
