

Photovoltaics from Germany

Solar power is a lasting and climate-friendly energy source. It is becoming increasingly economical, and thus establishing itself as a cornerstone of a future with sustainable electricity production worldwide.

The photovoltaics market is showing very rapid development. The annual production volume of solar power systems has increased tenfold within seven years to 1,400 MWp.

Targeted development of the German photovoltaics market has made it possible to create a strong and innovative photovoltaic industry in Germany. It produces all the top-quality components necessary for grid-connected and stand-alone photovoltaic systems.

Photovoltaic companies from Germany are active all over the world and offer photovoltaic systems and components, consultancy, engineering, and project planning, drawing upon the wealth of experience that has been gained in the German solar market. Take advantage of our experience.

The German Solar Industry Association (Bundesverband Solarwirtschaft, BSW) represents the interests of the German solar industry.
