

Keep Kyoto on Track

*1% increase in GDP corresponds to
a 1.5% increase in overall mobility demand*

30% of CO₂ Emissions come from Transport

Rail and Public Transport produce 3 times fewer emissions
per passenger transported*

*Rail with 10-40% market share, only produces 1% of
the emissions for transport globally*

*Even with today's technologies Rail and Public Transport are
between 3-10 times more energy efficient than the private car
(depending on the load and distance)*

**Railways and Public Transport
Bring Advantages
to all Members of Society**
