

# Wind is modern energy

Our environment depends on our ability to turn to sustainable and competitive energy. Energy that does not pollute, create waste or produce greenhouse gasses. Modern energy.

Wind is modern energy.

Vestas has installed more than one third of all wind turbines in the world and we predict that 10% of the global electricity consumption will be covered by wind in 2020. It is time to let modern energy power us, and the best day to start is today.
