We can evolve without changing everything!

The high temperature heat pump from Airwell is ideal for **new** or **refurbishment** residential applications. It replaces your fuel or gas boiler (or can be combined with your existing boiler) **without any need to replace your existing radiators**. The high temperature heat pump from Airwell can **save up to 70% energy** compared to conventional heating systems. It produces **hot water at 65 °C** while the outside temperature can drop down to **-20 °C**. In addition, this high temperature heat pump **reduces CO² emission up to 80%** compared with traditional heating systems. The Airwell heat pumps are designed and manufactured in our Normandy **factory in France**. 

Technology in harmony with the environment
