

Regione Abruzzo, Energy Department/ARAEN Regional Energy Agency, has been committed for years in many dynamic energy development, dissemination and training actions. This approach has led to very good results at national and European level.

The regional energy development is ruled by REP (Regional Energy Plan). It is the document used to program and manage strategic energy actions, harmonize them with the local context and create reference framework for public and private stakeholders who are involved in energy matters, and create a database in order to process them.

On 6th April 2009 Abruzzo was hit by an earthquake that strongly damaged many buildings, in particular in the historic city of L'Aquila and its province. Regione Abruzzo now has the challenge to quickly rebuilt those buildings that were damaged using not only earthquake proof criteria but also energy efficiency ones. This approach will lead to a energy consumption reduction far beyond the minimum requisites established by Legislative Decree 192/05 and following decrees in line with the European Directive on energy saving in buildings.

We are continuing with the dissemination and awareness campaign for sustainable energy development. The whole population of Regione Abruzzo is benefiting from the complete actions that include all the energy sectors.

ALL THE ACTIVITIES CAN BE SUMMARIZED AS FOLLOWS:

- Awareness campaign in schools (Energiochi)
- Biomass
- Hydrogen

EU PROJECTS

- ENERWOOD
- REGENERGY
- ENERSUN
- PROBIO
- BIOGAS REGIONS

STRATEGY FOR THE DEVELOPMENT OF RENEWABLE ENERGY SOURCES

The regulation tools that allow a correct building of renewable energy plants on the local territory are the following:

- guidelines for wind energy plants in the regional territory;
- guidelines for photovoltaic energy plants in the regional territory;
- study to support the regional planning for water resources.
