

ENERGY SOURCES FOR THE FUTURE

In Västra Götaland, the good life takes on many expressions. Our role deals with health and medical services as well as sustainable regional development. But it is also about the creation of meeting-places and the harnessing of good ideas and creativity. This may involve initiatives for interaction on sustainable energy systems and energy-efficient construction. Or ways of increasing children's and youngsters' interest in the natural sciences and technology. When we are all dedicated, the good life grows strong roots.
